# WEEKLY EPIDEMIOLOGIST REPORT October 2, 2023

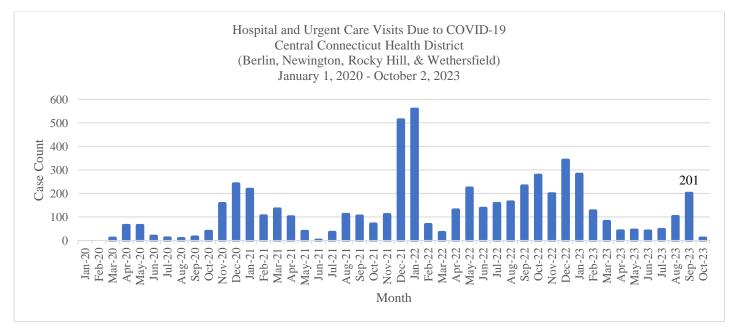

Christine DePierro-Gacek, MAT, MPH EPIDEMIOLOGIST, Central Connecticut Health District

#### **RESPIRATORY VIRAL SEASON**

As our leaves start to change color, we can also start see an increase in respiratory illness. This season, the Connecticut Department of Public Health and the Centers for Disease Control and Prevention are referring to this season as the "trifecta." We can expect to see similar trends as last year for COVID-19, influenza and RSV.

### **COVID-19 SURVEILLANCE**

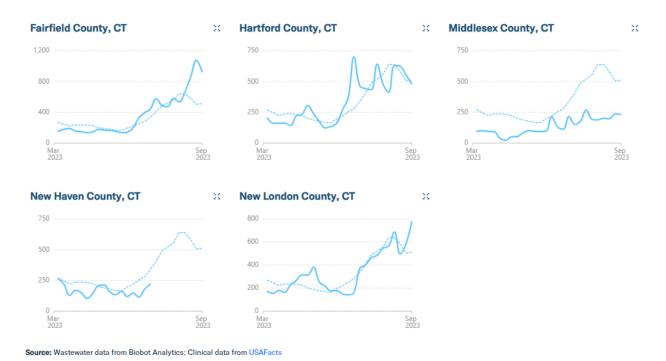

Data for COVID-19 was collected on October 2, 2023 from EpiCenter. The bar graph below illustrates the syndromic surveillance of hospital and urgent care visits due to COVID-19. September had a 97% increase in district cases being seen at urgent care centers or hospitals with a COVID-19 diagnosis who were experiencing symptoms. We can expect to see the number of hospital and urgent care visits continue to increase as EG.5 and FL.1.5.1 Omicron variants continue to spread.

According to Biobot wastewater surveillance, genomic sequencing results for the Northeast (September 29, 2023) showed that EG.5 remains the dominant lineage circulating (34.1%). FL.1.5.1 has been picked up in wastewater in the Northeast at 12.1%. Both EG.5 and FL.1.5.1 have the F456L spike mutation. The table below shows the adbundance of variants detected in wastewater in the Northeast Region which includes the states of Marlyand, Pennsylvania, Delaware, New York, Massachusetts, Vermont, Connecticut, New Jersey, Maine, New Hampshire, and Rhode Island.

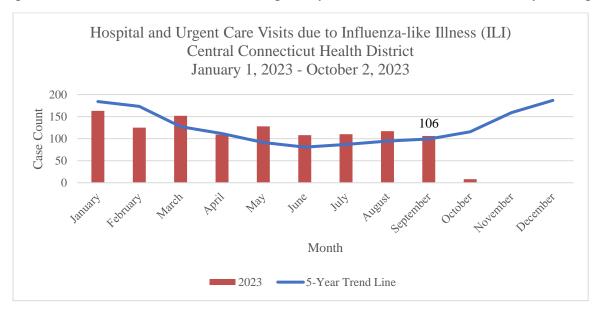

SARS-COV-2 Variant	Percent	Change
XBB	11.3	-2.4
XBB.1.5	9.2	+0.3
XBB.1.16	18.1	-1.2
<b>EG.5</b>	34.1	+2.2
XBB.1.9.2	5.0	-0.7
XBB.1.9	1.0	-0.8
XBB.1.9.1	8.3	+2.8
FL.1.5.1	12.1	+12.1
Other		+0.5

The graphs below depict the number of viral copies of SARS-COV-2 that have been isolated in participating wastewater treatment plants in Connecticut counties. The number of viral copies have been elevated in Hartford County since this past July.

#### INFLUENZA SURVEILLANCE

Data for Influenza-like Illness Syndromic Surveillance was collected on October 2, 2023 from EpiCenter. The graph below illustrates the syndromic surveillance of hospital and urgent care visits due to influenza-like illness (ILI) five- year average trend line (2018-2022) compared to this years cases. Other circulating respiratory viruses can present as influenza-like illness. The district has received its first laboratory confirmed case of flu for this season on September 9, 2023. The levels of ILI can be attributed to other respiratory diseases with similar symptoms to influenza (see the National Respiratory and Enteric Virus Sureillance System Update).

#### **RESPIRATORY SYNCYTIAL VIRUS (RSV)**

This September, there have been three suspected cases of RSV in the district. As we continue into the Fall and Winter we can expect to see an increase in the number of repiratory illness cases due to COVID-19, Influenza and RSV.

To prevent serious disease complications from influenza, consider getting your annual flu shot. CCHD is holding vaccination clinics next month in all four towns. To schedule your flu shot with us please visit: <a href="https://www.ccthd.org/book-appointment">https://www.ccthd.org/book-appointment</a>. The RSV is available for persons over 65, please encourage residents to check with their provider to see if they have it available. The updated COVID-19 booster is also available at participating pharmacies. Remember the best way to prevent the spread of infectious respiratory illness is to:

- Cover your cough and sneezes,
- Wash your hands often,
- Get vaccinated,
- Stay home when you are ill,
- Minimize close contact with sick people.

## MOSQUITO-BORNE DISEASE SURVEILLANCE

The State of Connecticut's Agricultural and Experimentation Station (CAES) performs mosquito trapping and testing starting at the beginning of June and ending in late October. Arboviruses tested at CAES include:West Nile Virus (WNV), Eastern Equine Encephalitis virus (EEE) and Jamestown Canyon Virus (JC). CAES has trapped and tested **325,599** mosquitoes between June 1, 2023 – September 25, 2023. Testing sites are located in 89 towns. Newington and Wethersfield are the only towns in the health district with test sites (see table below). JC and EEE continue to be detected in mosquitoes through out the State. There were WNV, JC or EEE positive mosquitoes collected in the last reporting period. There have been two human case of WNV for this year from New Haven County and Hartford County. There have been no human cases of EEE or JC reported in Connecticut or our district yet this year.

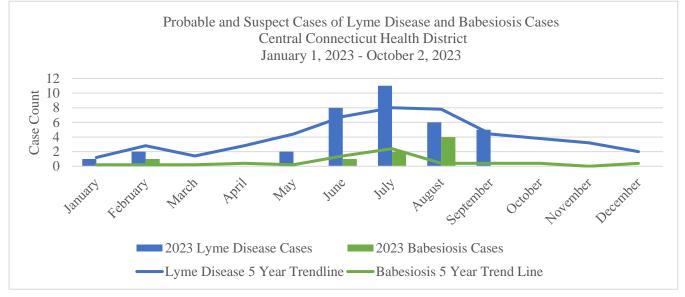

Town	Site	Cumulative Mosquitoes Tested	Test Results	Virus	Mosquito Species (Positive Samples)	Date Collected
Newington	Churchill Park	1,636	Negative	-	-	-
					Culex pipiens (1)	7/17
					Culex restuans (1) Culex salinarus (2)	7/27
					Culex pipiens (7), Culex resuans (1)	8/9/23
Wethersfield	Goff Road	6,295	Positive	WNV (23)	Culex pipiens (2)	8/17/23
					Culex pipiens (1), Culex restuans (1), Culex salinarus (1)	8/29/23
					Culex pipiens (2), Culex restuans (1)	9/6/23
					Culex pipiens (1)	9/14/23
				JC (2)	Anopheles puntipennis (1)	8/8/23
					Anopheles puntipennis (1)	8/17/23

Data regarding mosquito-borne disease surveillance is collected from <u>https://portal.ct.gov/CAES/Mosquito-Testing/Mosquito-Testing</u> and CTEDSS.

### TICK-BORNE DISEASE SURVEILLANCE

The graph below shows the five-year average trend lines for babesiosis and lyme disease cases (2018-2022) compared to this years cases. No new cases have been reported this past week.

Visit CDC's "Fight the Bite" page for additional information on preventing tick and mosquito bites. https://www.cdc.gov/fight-the-bite/prevent/index.html

## FOOD RECALLS

Click the link to know what foods have been recalled because they are contaminated. Please check your cupboards and throw out any of these items: <u>https://www.cdc.gov/foodsafety/</u>

The Central Connecticut Health District is committed to improving the quality of life in our communities through prevention of disease and injury, fostering of a healthy environment, and promotion of the health of our residents.
